

# Know the truth about 3M™ Bair Hugger™ warming technology.

**The 3M™ Bair Hugger™ system is designed to keep a surgical patient's core body temperature within normal ranges.** Maintaining a patient's normal body temperature has been shown to reduce complications such as the risk of infections and the length of hospital stays, and improve overall outcomes from surgery.

**The Bair Hugger system has been used to safely warm 200+ million patients** and there has not been a single confirmed case of infection caused by the system.

**More than 170 studies and 60 randomized controlled clinical trials** document the efficacy, safety and clinical benefits of the Bair Hugger system's technology.

**Used by more than 80% of U.S. hospitals,** the Bair Hugger system is the No. 1 choice for patient warming in the country.

**Nurses and surgeons turn to the Bair Hugger system more than 50,000 times each day** to keep patients comfortable and warm because they know it's safe and effective.
